Product information

Alphacool's fittings go new ways in looks, quality of manufacturing, colours and choice. The inner diameter of these fittings truly deserves the „high flow“ attribute!

The first three colours, Chrome, Deep Black and Shiny Copper offer something for every taste. The product matching series are designed to look elegant in every system, highlighting the individual design of the computer. The limits are endless with these Alphacool fittings in combination with Alphacool tubing!

With a new process during chromatising the surface finish is completely connected with the brass body, hence ensuring permanent intense colours and peeling of the chrome layer. The Alphacool name in blue lettering on some of the fittings additionally underlines the individuality of these items.

Functionality of this connector:

Beside classical fittings, barb fittings are another way to connect hoses with fittings. They are much more compact then classical fitting so that you can see more of the tube.. Very popular in Casemoddingsystems!

Extreme Highflow:

In difference to other fittings this barb fittings have a bigger inner! This fitting is unique in the Watercoolingscene because of his 13mm outerdiameter with 10mm fitting innerdiameter.

Note on application

Please use only in conjunction with clear transparent water cooling fluids. The particles and additives in Pastel liquids can clog and permanently damage water cooling products such as radiators, pumps, coolers and hoses. This can result in voiding the manufacturer's warranty as well.
