Article text

Alphacool's Eiszapfen connection series is the high-end version of the proven connections!

All the requirements that a connection has to meet are met here: high flow, shape, workmanship and color. Uncompromising development and production have made the icicles what they are. Two versions are available in brilliant chrome and matte, deep black, which fit perfectly into any system.

Using special processes, the coatings are firmly bonded to the substrate, ensuring the longevity of the intense colors and preventing the coating from flaking. Each connection now also has the Alphacool logo, which makes it unmistakable in addition to its special shape!

Design: Straight screw-on nozzle 16/10mm

This connector has a 1/4" thread on one side and is therefore compatible with 95% of all components compatible. The other side is suitable for a 16/10mm hose.

Six-pack:

Since six connections of one type are often required, Alphacool now offers six-packs. This offers many advantages from which you can benefit!
