

CORE

CORE XT45 AURORA COPPER 240MM RADIATOR

Alphacool introduces a novelty in the field of radiators with the new Core series. The design of the outer casing looks very harmonious, which is emphasized by the discreet aRGB LED lighting on the side panel. The recessed ports are flush with the surface of the radiator. The revised fin structure and the amazing 16 cooling channels, instead of the previous 12, optimize the flow and increase the cooling performance significantly. The cooling fins, channels and the pre-chambers are made entirely of copper.

BRIGHT LIKE A DIAMOND

POWERFUL AND EFFICIENT.

Variants:

- 1U and 2U

Features:

- Real full copper radiator
- 16 instead of 12 water-bearing channels
- Finer fin structure for higher cooling performance
- Illuminated side panel
